

Africa overseas microgrid energy storage

Are microgrids a viable solution for Africa's rural communities?

Microgrids offer a promising solution for electrifying Africa's rural communities and advancing the transition to clean energy. They offer a number of advantages over traditional grid expansion, including lower costs, greater flexibility, and easier integration of renewable energy sources.

What is energy storage in a microgrid?

In a microgrid, energy storage performs multiple functions, such as ensuring power quality, performing frequency and voltage regulation, smoothing the output of renewable energy sources, providing backup power for the system, and playing a crucial role in cost optimization.

Why do we need microgrids?

Microgrids provide an important energy access especially for rural communities. Source IEA 2022. 2. By storing energy, microgrids can smoothen electricity access. Power supply in developing countries is riddled with intermittency challenges either as a result of fuel supplies shortages, inefficient grid systems or over-demand of energy.

How many solar mini-grids are deployed in eastern Africa?

We have deployed 8 solar mini-grids in the Eastern African region: 5 in Kenya and 3 in Somalia. They range between 3kW and 100kW in size and provide power to about 1600 households in conflict and underserved parts of the region. We provide development, EPC and O&M services that you can trust.

What's happening with energy storage in Africa?

A roundup of energy storage news from across the continent of Africa, with Morocco's ONEE shortlisting bidders for a pumped hydro project, Somalia launching a grid-scale solar and storage tender, and a microgrid pairing grid-scale solar, BESS and diesel at a mine in Zambia. Morocco: utility ONEE progresses 300-400MW pumped hydro

How can microgrids help reduce intermittency?

When combined with energy storage systems, microgrids can help reduce intermittency by storing excess energy during periods of high generation and releasing it during periods of low/no generation or by acting as backup systems during periods of disruption on the main grid.
