

America's new transportation energy storage

How many states have energy storage projects under construction?

The need for energy storage resources continues to be strong across the country, as 31 states currently have energy storage projects under construction.

What is advanced rail energy storage?

Advanced Rail Energy Storage (ARES) uses proven rail technology to harness the power of gravity, providing a utility-scale storage solution at a cost that beats batteries. ARES' highly efficient electric motors drive mass cars uphill, converting electric power to mechanical potential energy.

Why should we invest in a US energy supply chain?

"Our manufacturing facilities in Utah, Texas, Tennessee, and Arizona support more reliable and cost-effective energy production while creating a resilient U.S. supply chain that advances American innovation, jobs, and energy security. These investments are about building the future of energy--right here in the United States."

Now imagine a world where buses, trucks, and even highways store energy like squirrels hoarding acorns. That's exactly what the new U.S. transportation energy storage proposal aims to tackle.
