

Average domestic energy storage price per 250kW in Spain

Why is electricity so expensive in Spain?

Transmission and Distribution Costs: The fees for getting electricity from power plants to consumers.
Renewable Energy Impact: Spain's increasing reliance on renewable energy sources like solar and wind, which can lower long-term prices. Electricity prices in Spain tend to fluctuate depending on the season.

What is a dynamic electricity tariff in Spain?

Spain is a European pioneer in dynamic electricity tariffs - plans where prices change every hour, based on wholesale rates. The most common dynamic option? PVPC (Precio Voluntario para el Pequeño Consumidor) - the regulated hourly tariff used by ~ 1/3 of households. In 2024, it was reformed to include futures prices, reducing volatility.

How will Spain's electricity prices change in 2024?

For 2024, electricity prices in Spain are expected to undergo some changes, starting with phasing out tax rebates. During 2023, the average electricity bill for households on the regulated tariff (PVPC) was EUR60.26 per month (EUR723 per year), representing a significant reduction compared to previous years.

How do I find the most cost-effective electricity provider in Spain?

Here are some tips for finding the most cost-effective option: Use online comparison tools to compare electricity prices and plans across different suppliers in Spain. Make sure to compare both fixed and variable rate options. Many providers offer promotions or discounts for new customers.
