How much does cobalt cost in 2022?

For example, the price of cobalt has fallen from roughly \$70,000 per metric ton in 2022 to about \$30,000 in 2024. Similarly, the price for lithium carbonate has fallen from a high of approximately \$70,000 per metric ton to well below \$15,000 in 2024.

Are lithium and cobalt prices market-reflective?

This includes benchmark prices for lithium and cobalt, two battery materials that continue to experience market volatility and supply/demand imbalances. Our widely used prices are market-reflective, assessing both the buy- and sell-side of transactions.

How is lithium nickel manganese cobalt oxide powder produced?

Schematic of a process for the production of lithium nickel manganese cobalt oxide powder. The product stream, a slurry of solid precipitates in a solution, is phase separated, and then filtered and washed several times. The filtration may be done in a rotary vacuum filter followed by drying in a spray dryer.

How will cathode technology change the price of cobalt metal?

As the cathode material technology matures, manufacturers will require less frequent design changes leading to longer plant life and lower depreciation costs. The price of cobalt metal has changed in the last six years from a peak of \$27 per kg to a low of \$22 per kg.

Does raw material cost affect lithium-ion battery pack prices?

The analysis shows that each material only contributes a minor share to total raw material cost. In addition, total raw materials cost only constitute a share of total product price. The cost increase of one raw material will therefore only have a limited impact on lithium-ion battery pack prices.
