How much does cobalt cost in 2022?

For example, the price of cobalt has fallen from roughly \$70,000 per metric ton in 2022 to about \$30,000 in 2024. Similarly, the price for lithium carbonate has fallen from a high of approximately \$70,000 per metric ton to well below \$15,000 in 2024.

Are cobalt & lithium prices reviving in early 2021?

Cobalt and lithium prices have revived in early 2021, suggesting the start of a revival in the EV market after the Covid-induced slowdown. The price of cobalt surged over 60 percent in the four months to late March while the lithium price has doubled over the last six months.

Why are cobalt prices consolidated?

In the weeks following confirmation that the cobalt market will face an additional three months of no exports from the Democratic Republic of Congo (DRC), metal prices have consolidated as participants point to the future for bullish sentiment.

Can batteries decarbonise the transport sector?

Batteries have undeniably become the principal method to decarbonise the transport sector, through their application in electric vehicles (EVs). According to the IEA's Global EV Outlook 2022, battery demand is expected to grow by about 30% per year, from 2023 to 2030.

For miners supplying the EV battery industry, the news remain negative: when pairing metals demand with prices in the supply chain, declines this year are brutal.
