Is energy storage the future of wind power generation in Finland?

Wind power generation is estimated to grow substantially in the future in Finland. Energy storage may provide the flexibility needed in the energy transition. Reserve markets are currently driving the demand for energy storage systems. Legislative changes have improved prospects for some energy storages.

What happened to battery energy storage systems in Germany?

Small-scale lithium-ion residential battery systems in the German market suggest that between 2014 and 2020, battery energy storage systems (BESS) prices fell by 71%, to USD 776/kWh.

Are high Vres shares possible in the Finnish energy system?

In conclusion, these studies indicate that high VRES shares in the Finnish energy system are possible, but require measures such as energy storage and demand response for their successful integration. 3.

What are some examples of GWh-scale borehole thermal energy storage in Finland?

Examples of larger GWh-scale borehole thermal energy storages built in Finland include one built at a logistics center in Sipoo and an underground parking lot in Turku. Normally, the depth of the boreholes for ground-source heating and in borehole thermal energy storages is a few hundred meters at most.

What is the growth rate of PV installations in Finland?

Nevertheless, there has still been significant growth in Finland for both industrial and household PV installations. In 2022, the installed capacity of mostly small-scale grid-connected PV installations increased to 395 MW from 288 MW in the previous year, yielding an annual growth rate of 37 %.

How much electricity does Finland import in 2022?

In 2022, the amount of net imports was 12.5 TWh, and during 2001-2022, it varied between a minimum level of 4.9 TWh and a peak of 20.4 TWh, which can be considered as a supply security issue when Finland relies heavily on neighboring countries. Electricity imports used to come mainly from Sweden and Russia.
