What is the energy mix in Benin?

Energy in Benin has a diverse energy mix and takes several forms including: solar, wind, hydropower, biomass, fossil resources, and mineral resources. Out of this energy mix, about 60% of energy comes from biomass. Benin is also dependent on energy imports from Ghana and Côte d'Ivoire.

Is biomass a good energy source in Benin?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Benin: How much of the country's energy comes from nuclear power? Nuclear energy - alongside renewables - is a low-carbon energy source.

What type of energy is used in Benin?

In Benin, biomass-based energy sources account for 59.4% of the energy sector (Tableau de Bord de l'Energie au Bénin, 2005), followed by petroleum products (38.4%), and to a lesser degree, electricity (2.2%).

How many hydropower plants are there in Benin?

The Ouémé River, the largest river in Benin, was estimated to be able to house around ten hydropower plants with power ratings ranging between 10 MW and 160 MW.

Does Benin have a large hydroelectricity potential?

Benin has a huge and untapped renewable energy potential, particularly in hydroelectricity. Currently, only one major hydroelectric site functions in the country. Developing over 80 pre-identified sites using micro-hydro applications could help Benin increase its energy resilience and better utilize its hydroelectricity potential.

What can Benin do with waste?

Furthermore, Benin is a cotton exporter belonging to the Economic Community of West African States (ECOWAS), and cotton production waste could be used to produce gas and electricity, helping Benin move towards energy self-sufficiency. Likewise, household waste can be converted into energy, and is an ideal raw material for biogas production.
