Why do we regulate the energy sector in Botswana?

Enhancing Botswana's economy by regulating the energy sector. We provide an efficient energy regulatory framework for Electricity, Gas, Coal, Petroleum products, solar and all forms of renewable energy. We ensure that service standards are set and protect customers and consumers from monopoly power of energy. who are we?

Can Botswana generate electricity from coal?

However, Botswana has ample renewable energy potential to augment generation from coal. Currently, solar energy contributes insignificantly to electricity generation despite the abundance of the resource. There is also wind and coal bed methane potential which have not been fully explored.

What is the main source of electricity in Botswana?

Coal is the main source of electricity generation in the country, followed by diesel. However, Botswana has ample renewable energy potential to augment generation from coal. Currently, solar energy contributes insignificantly to electricity generation despite the abundance of the resource.

How can Botswana improve its energy supply?

This includes increasing the supply and reliability of Botswana's energy supply, reducing the cost of domestic electricity, reducing and ideally removing the need for Botswana to import external energy and creating a revenue stream through the export of cleaner electricity and sale of gas. ..

How has the energy sector impacted Botswana's Economic Development Prospects?

Botswana has experienced some constraints in the energy sector in recent years, which to some extent have negatively impacted on the country's economic development prospects. A devastating power supply and demand mismatch was encountered between the years 2008 and 2014, and this breached the country's power supply security.

Why is solar energy important in Botswana?

The operation of the plant using gas will reduce the country's emissions from power generation as the gas is cleaner compared to diesel. Despite the abundance of solar energy potential in Botswana, solar contributes insignificantly to the energy mix. It is mainly used for lighting, water heating and water pumping.

Botswana generated just 0.26% of its electricity from solar in 2020, and it has only 6 megawatts (MW) of installed solar capacity out of a total 890 MW energy capacity, with coal accounting for 99 ...
