

How much energy does Burkina Faso use?

Burkina Faso produced 69 kilotonne of oil equivalent (ktoe) of energy in 2015, 89.8% of which was generated from fossil fuels. Final consumption of electricity was 86 ktoe. The country uses energy from biomass, fossil fuels, hydroelectricity, and solar.

Is Burkina Faso electrified?

Burkina Faso is one of the least electrified countries globally, currently at 19% overall, with 60% of the urban and only 3% of the rural population connected to electricity. Access to non-solid fuels is also very limited, reaching around 8% nationally.

What are the different types of energy transformation in Burkina Faso?

One of the most important types of transformation for the energy system is the refining of crude oil into oil products, such as the fuels that power automobiles, ships and planes. No data for Burkina Faso for 2021. Another important form of transformation is the generation of electricity.

Who regulates electricity in Burkina?

The energy regulator is the Electricity Regulatory Authority (ARSE). The National Electricity Company of Burkina (SONABEL) is the main vertically-integrated electricity operator with a national monopoly on the generation and distribution of electricity in the urban centres.

How has Burkina Faso changed over the years?

Burkina Faso has made remarkable progress in recent years, with an increase in installed capacity from 324.6 megawatts (MW) in 2017 to 410 megawatts in 2019. The share of renewable energy also surged from 9.4% in 2015 to 18.36% in 2019.

Is biomass a source of electricity in Burkina Faso?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Burkina Faso: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.
