

Abstract While epitaxial thin films and polymer films exhibit superior voltage endurance and higher maximum polarization (P_{max}), making them advantageous for achieving ...

Abstract The development of high-performance lead-free dielectric capacitors based on BCZT ceramics has traditionally relied on compositional doping to enhance energy ...

Dielectric ceramics are highly desired for electronic systems owing to their fast discharge speed and excellent fatigue resistance. However, the low energy density resulting ...

Dielectric capacitors are widely utilized in large-scale power systems, including applications in medical and military fields. However, their relatively low energy storage density ...

Compared with fuel cells and electrochemical capacitors, dielectric capacitors are regarded as promising devices to store electrical energy for pulsed power systems due to ...

Lead-free ceramic-based dielectric capacitors show huge potential in electrical energy storage in pulsed power systems due to their fast charge/discha...

NaNbO_3 -based lead-free ceramics have attracted much attention in high-power pulse electronic systems owing to their non-toxicity, low cost, and superior energy storage ...

The chapter reviews the energy-storage performance in four kinds of inorganic compounds, namely, simple metal oxides, antiferroelectrics (AFEs), dielectric glass-ceramics, and relaxor ...

High-entropy ceramic dielectrics show promise for capacitive energy storage but struggle due to vast composition possibilities. Here, the authors propose a generative learning ...

There is an urgent need to develop stable and high-energy storage dielectric ceramics; therefore, in this study, the energy storage performance of NaO ...

The influence of niobium (B-site) doping upon the BNST perovskite structure was examining phase study, microstructure, dielectric, and energy storage properties. The novelty ...

This work provides the optimized energy storage properties and dielectric stability of BNT-based ceramics at reduced sintering temperatures, and pave the way for the ...

Abstract High energy-density (W_{rec}) dielectric capacitors have gained a focal point in the field of power

electronic systems. In this study, high energy storage density ...

In this review, we present a summary of the current status and development of ceramic-based dielectric capacitors for energy storage applications, including solid solution ...

The relationship between microstructure and macroscopic energy storage performance of materials is discussed based on the four effects of high-entropy ceramics. We ...

The dielectric ceramic capacitor serves as the core energy storage element in the pulsed power system. However, the inability to balance high energy storage density (W_{rec}) ...

Dielectric ceramic capacitors, with the advantages of high power density, fast charge-discharge capability, excell... Dielectric ceramic capacitors, with the advantages ...

This work brings new material candidates and structure design for developing of energy storage capacitors apart from the predominant perovskite ferroelectric ceramics.

Abstract Dielectric ceramic capacitors are candidates for a new generation of pulsed power supplies, owing to their superior power density. Nevertheless, low energy ...

In addition, BT ceramics have high dielectric constant, low dielectric loss, high energy storage efficiency, good temperature stability and simple preparation process.

Dielectric capacitors with ultrahigh power density have emerged as promising candidates for essential energy storage components in electronic and electrical systems.

Dielectric ceramic capacitors with ultrahigh power densities are fundamental to modern electrical devices. Nonetheless, the poor energy density confined to the low ...

This is an innovative comparative analysis of the dielectric and energy-storage capabilities of multiple metal ion modified BaTiO₃-based ceramics.

Dielectric ceramic capacitors, with the advantages of high power density, fast charge-discharge capability, excellent fatigue endurance, and good high temperature stability, have been ...

In this study, we successfully developed ternary-doped energy-storage ceramics with outstanding energy-storage capabilities in BNT matrices. We comprehensively examined ...
