Which rigs have energy storage systems for onshore drilling?

The energy storage system developed for onshore drilling is among the world's first ones. As a foreign analog, only the project of the German rig manufacturer Bentec implemented in Oman can be highlighted. In 2017, the container-type 0.9 MW Bentec ESS with a storage capacity of 0.3 MW was put into trial operation on the KCA Deuteg T-94 rig.

Can electric energy storage be used for drilling based on electric-chemical generators?

The article outlines development of an electric energy storage system for drilling based on electric-chemical generators. Description and generalization are given for the main objectives for this system when used on drilling rigs isolated within a single pad, whether these are fed from diesel gensets, gas piston power plants, or 6-10 kV HV lines.

Which rigs use lithium-ion energy storage?

The solution has been installed on various marine vessels worldwide, including the West Mira ultra-deep semi-submersible, the world's first low-emissions drilling rig to use lithium-ion energy storage.

Why do drilling rigs need a permanent energy source?

An energy source permanently integrated into the rig circuit will allow drilling contractors to compensate for voltage dips and surges, which will reduce emergency shutdowns and downtime of drilling equipment (Chervonchenko and Frolov 2020), minimize drilling hazards, and improve the DPS operation stability.

Which Jack-up drilling rigs have a hybrid power plant?

Siemens Energy signed an agreement with Maersk Drilling to upgrade two ultra-harsh environment CJ70 jack-up drilling rigs in the North Sea with hybrid power plants using lithium-ion energy storage. The rigs - the Maersk Intrepid and Maersk Integrator - were retrofitted with BlueVault(TM) batteries from Siemens Energy.

What is a battery energy storage system?

Our Battery Energy Storage System (BESS) is a power management solution enabling drill rigs to run efficiently with either fewer engines or lower engine loads to help reduce engine runtime, diesel usage and carbon footprint.
