Why should you choose Eaton energy storage systems?

Take control of your energy supply, cut your energy bills and simplify your shift toward a more sustainable future. Eaton energy storage systems enable communities and businesses to access a safe, reliable and efficient solution to support the electrification of transportation.

What is a liquid cooled battery energy storage system?

The system consists of: Ready to install liquid-cooled battery energy storage system with one (2-hour version) or two (4-hour version) battery cabinets, and a PCS cabinet. Liquid cooling provides two years longer battery service life and 15% higher discharge capacity, while maintaining less than 2.5 degree C delta between cells.

Why should you choose a battery based energy storage system?

By sourcing batteries separately, users can expand their energy storage capacity as needed without overhauling the entire system. This scalability makes it an ideal solution for both residential and light commercial applications, future-proofing investment and enabling smart energy management.

How many energy storage units can be connected together?

Stackable and lightweight, installers can effortlessly connect up to four units together for additional energy storage. Available in three sizes including 9 kWh, 13.5 kWh, and 18 kWh to meet an installation company's growing customer energy demands. Operating modes: back-up mode, self-use mode, time-of-use mode and custom modes

How do energy storage systems benefit EVCI networks?

Our energy storage systems allow EVCI networks to better manage and distribute peak demand to save money on energy costs, reduce their impact on electrical infrastructure and earn revenue from grid support programs.

Why is energy storage important?

Energy storage provides the agility and efficiency to keep pace with an evolving energy landscape. Unlock the full potential of your network with energy storage. Energy storage is critical to unlocking the clean energy future.
