A hybrid inverter combines a regular solar inverter and a battery inverter. Unlike traditional solar inverters that convert direct current (DC) from solar panels into alternating current (AC) for immediate use, these hybrid inverters also handle excess solar energy in batteries for future use. Comparison with Traditional Solar Inverters

You actually have a third option-- charge from grid and use an off-grid inverter. If you want to be fully compliant that is going to be the lowest cost option. The hybrid inverter works best for isolating from the grid when grid is down, rather than switching to grid when battery/solar are down (but many of them can work in that mode).
