

Homogeneous ternary and quaternary molten nitrate salts with low melting points ($<110 \text{ }^\circ\text{C}$) with enhanced thermo-physical properties were synthesized for thermal energy ...

In this paper, we develop a novel composition of energy storage elements that can charge or discharge independently and provide a sufficient linear energy storage model of ...

With the advantages of high energy density and low manufacture cost, lithium-rich layered oxides (LLOs), typically with a layered O₃-type structure, are regarded as ...

Herein, a homogeneous low-tortuosity separator membrane (LTSM) with enhanced kinetics of ion desolvation and transfer is constructed on Zn anode to eliminate the ...

As the world pledges to significantly cut carbon emissions, the demand for sustainable and clean energy has now become more important than ever. This includes both ...

In this paper, we develop a novel composition of energy storage elements that can charge or discharge independently and provide a sufficient linear energy storage model of the composite ...

The demand for dielectric capacitors with higher energy-storage capability is increasing for power electronic devices due to the rapid development of electronic industry. Existing dielectrics for ...

In this letter, we develop a novel composition of energy storage elements that can charge or discharge independently and provide a sufficient linear energy storage model of ...

Homogeneous ternary and quaternary molten nitrate salts with low melting points ($<110 \text{ }^\circ\text{C}$) with enhanced thermo-physical properties were synthesized for thermal energy storage media and ...

Chemistry - A European Journal Research Article Homogeneous-to-Heterogeneous-Strategy Enables Multifunctional Phase-Change Materials for Energy Storage ...

Since the beginning of this year, major energy storage companies have released new energy storage products with larger capacity, higher energy density and longer life. The ...

In this letter, we develop a novel composition of energy storage elements that can charge or discharge independently and provide a sufficient linear energy storage model of the composite ...

: Homogeneous electrocatalytic reaction, Electrochemical kinetics, Square wave voltammetry, Finite element

modelling, Energy storage Abstract: The application of ...

We present a novel linear model that provides a sufficient representation of aggregations of homogeneous energy storage elements. For large numbers of elements or and small control ...

Polymeric conducting binders have increasingly become a subject of significant research interest due to their dual roles as both a binder and a conducting agent. This dual ...

Here, we report the extraordinary electrochemical energy storage capability of NiMoO₄@NiMoO₄ homogeneous hierarchical nanosheet-on-nanowire arrays (SOWAs), synthesized on nickel ...

The demand for dielectric capacitors with higher energy-storage capability is increasing for power electronic devices due to the rapid development of electronic industry. ...

Homogeneous-to-Heterogeneous-Strategy Enables Multifunctional Phase-Change Materials for Energy Storage. Chemistry - A European Journal (IF 3.7) Pub Date : 2022-04-07, DOI: ...

Dive into the research topics of "Homogeneous/Inhomogeneous-Structured Dielectrics and their Energy-Storage Performances". Together they form a unique fingerprint.

In this letter, we develop a novel composition of energy storage elements that can charge or discharge independently and provide a sufficient linear energy storage model of the composite ...
