

How to use the video surveillance equipment at the energy storage station

How does surveillance station work?

With Surveillance Station, you can perform various functions, from the basic PTZ (Pan/Tilt/Zoom) and snapshot features to the e-map, manual recording, video analytics, and analytics history functions. DSM admin (or a user belonging to the administrators group) and users with the manager privilege can configure layout setting.

How much storage does a video surveillance system use?

60 GB is the most common storage consumption in today's video surveillance systems. It is large enough to record quality video for some period of time but is not too expensive. For instance, 16 cameras consuming 60GB storage each would require 1 TB.

Why should you use Eocortex video surveillance system?

Thus, you can ensure the safety of plant personnel, and reduce staff costs. Download Eocortex mobile app and control cameras, watch the video from the cameras of your video surveillance system from anywhere on the globe.

With the help of remote video monitoring and real-time alerts, your team can take immediate action without needing to physically reach the scene. When ...

Exencell, as a leader in the high-end energy storage battery market, has always been committed to providing clean and green energy to our global partners, continuously ...

In Surveillance Station, the IP Camera application manages cameras connected to the NAS. When adding your camera, the IP Camera application will automatically search your network ...

2 Related works A video surveillance system is an action of monitoring the activity in public or private scenes using cameras. In the past, the function of a basic video surveillance system ...

The core of video surveillance solutions in the power industry lies in the combination of high-definition cameras and intelligent analysis systems. High definition cameras can capture clear ...
