What is a user-side energy storage planning and operation simulation?

In the industrial and commercial user-side energy storage planning and operation simulation, the analysis will be based on the IEEE 30-node system, as shown in Figure 1. The electrical load on the industrial and commercial user side will also change with time. User load can be divided according to seasonal changes.

What is industrial user-side energy storage system collaborative planning model?

That is, the industrial user-side energy storage system collaborative planning model is required to make the nominal decision results of the lower model meet all the basic constraints of the eco-industrial user-side energy storage system collaborative planning model again in the case of foreseeable day-ahead power market price uncertainty. 3.3.

How to plan industrial and commercial user-side energy storage (ICUs-es)?

When planning the industrial and commercial user-side energy storage (ICUS-ES) system, it is necessary to comprehensively consider the economy and environment of the system. Thus, it can ensure that the planning results of industrial and commercial user-side energy storage are more in line with the actual situation.

Should industrial and commercial users arrange energy storage?

Industrial and commercial users consume large amounts of electricity and have high requirements for a stable power supply. Therefore, it is necessary to encourage industrial and commercial users to arrange energy storage, and how to make reasonable planning is the main problem.

What is a multi-market joint energy storage planning framework?

A multi-market joint energy storage planning framework considering the energy market and ancillary service market is proposed. Considering the economic benefits of industrial and commercial user-side energy storage in the whole life cycle as the objective function, a double-layer programming decision-making model is constructed.

What are the planning costs and planning benefits of energy storage?

It can be seen from Table 4 that the planning costs and planning benefits of energy storage on the industrial and commercial user side are different under different electricity price cases. In general, under the best-case, the planning cost of industrial and commercial user-side energy storage is the lowest and the planning benefit is the largest.
