

This chapter is composed of two major sections: Smart Grid Technology Roadmap in Iran and National Smart Metering Program (FAHAM). The first section is develops the Iran smart grid ...

Smart transmission grid developments in Iran bring forward new requirements and challenges for the national power system. Regarding to Iranian smart transmission grid roadmap, the activities performed to implement it in Khorasan Regional Electricity Company are listed in this paper.

A Smart grid road map is defined as a set of subsystems and technologies which describe the different layers of the implementation, including equipment, ... Iran"s smart grid roadmap should be developed by: - specifying challenges, strategies, policies and development plans

This paper discusses the merits of Smart Grid, and proposes a roadmap for its roll-out in Iran. It proposes that Smart Grid is the logical next step of AMR and AMI systems.

This smart grid should be able to bring new abilities such as high reliability, self-healing, energy efficiency, price response, peak load reduction, and distribution automation. ... The presses of establishing the smart grid in Iran together with analysis of its roadmap in this country are discussed later. The challenges concerning with the ...

Download scientific diagram | Iran roadmap for smart grid roll-out from publication: Iranian smart grid: road map and metering program | | ResearchGate, the professional network for scientists.

To prepare the technology development roadmap of Iran smart grid, first smart grid and its technolo gies and areas are investigated. T h en, Iran smart grid vision was outlined...

In 2014, the Iran Smart Grid Technology Roadmap was developed with the aim of prioritizing the development and deployment of eight main SG areas in Iran. In this technology roadmap, the fields of ICT, customer-side technologies, and advanced metering technologies have the most attractiveness-capability to start the development and deployment of ...

These currents pilots should be subjected to test for the security of their communications. Figure 4. Smart Grid data collection in Iran o B. Evolution of Smart Grid in Iran As the next logical step to SMI, Smart Grid needs to ...

Smart grid in Iran: Driving factors, evolution, challenges and possible solutions ... The presses of establishing the smart grid in Iran together with analysis of its roadmap in this country are ...

To prepare the roadmap, all the lessons learned in comparative studies, background or benchmarking studies, frameworks, validated methodologies, and upstream national documents and drivers have been used to compile the Iran smart grid road map. Fig. 5 shows the stages of technology and the business development road map of the Iran smart grid.

Chapter 2 discusses the Iranian smart grid road map, focusing on technology development. The second part of this chapter focuses on the Iranian national advanced ... The smart grid project in Iran has been started with implementing smart meters for about one million customers. This project is called FAHAM and is a large pilot project that ...

establishing the smart grid in Iran together with analysis of its roadmap in this country are discussed later. The challenges concerning with the implementation of this concept along with their possible solutions are finally addressed in the power grid of Iran. Keywords- Smart Grid; resilient power system; renewable energy; energy efficiency; SMI

The FAHAM plan is to develop the Iran smart grid roadmap project, one of the subprojects of the Iran smart grid national grand project. Discover the world's research. 25+ million members;

establishing the smart grid in Iran together with analysis of its roadmap in this country are discussed later. The challenges concerning with the implementation of this concept along with ...

This paper discusses the merits of Smart Grid, and proposes a roadmap for its roll-out in Iran. It proposes that Smart Grid is the logical next step of AMR and AMI systems. It argues that Smart Grid is the collection of all technologies, concepts, topologies and approaches which allow the silo hierarchies of generation, transmission and distribution to be replaced with an end-to-end ...

Iranian smart grid: road map and metering program. Gevork B. Gharehpetian, ... Alireza Zakariazadeh, in Application of Smart Grid Technologies, 2018. Abstract. This chapter is composed of two major sections: Smart Grid Technology Roadmap in Iran and National Smart Metering Program (FAHAM). The first section is develops the Iran smart grid roadmap project, ...

communications scenarios inspired by different grid architectures which are used to more closely examine unique communication and interoperability requirements, with the specific goal of exploring relationship and associated interoperability impacts expanding communications in the grid will have on four key themes: grid cybersecurity, operations,

This article is a proposal for the development of a roadmap for the transformation of the electrical distribution network of the City of Douala into a smart distribution grid.

These currents pilots should be subjected to test for the security of their communications. Figure 4. Smart Grid data collection in Iran o B. Evolution of Smart Grid in Iran As the next logical step to SMI, Smart Grid needs

to leverage the SMI infrastructure and implement its distributed command and control strategies over SMI's backbone.

implementation of a smart grid in Iran is obtained. The presses of establishing the smart grid in Iran together with analysis of its roadmap in this country are discussed later. The challenges

The first step in planning for the smart grid implementation is to identify the present state of the grid and its infrastructure, the next step being to describe the vision. Thereafter is gap analysis. Gap Analysis is the method by which the road map is developed from where the grid is now to where the grid should be. Every power grid has its own characteristics and the level of its ...

Qualitative and quantitative indicators for monitoring progress of implementing a smart grid roadmap 41
Table 10. Examples of distributed generation 45 List of figures . Figure 1. Roadmap development process 5
Figure 2. Electricity system evolution 6 Figure 3. Energy system challenges and the role of smart grids in
response 7

Smart grids have become an urgent need to overcome the challenges of the 21st century. To transit the traditional grid to smart one, there must be a well thought out plan, called road map, which ...

This article comprises two significant sections: Iran's smart grid technology roadmap and the national smart metering plan (known as FAHAM). The FAHAM plan is to develop the Iran ...
