The cation intermixing at the LAO/STO interface was examined by atomic-resolution STEM energy  
dispersive X-ray spectroscopy (EDS) elemental mapping. ... Comprehensive STEM analyses of the LAO/STO  
heterostructures demonstrate that surface V O is the most probable source of the interface conductivity.

Our expansive mission means we have many opportunities in a variety of fields such as STEM, national  
security, international affairs, business, and program development. We offer many early career programs, to  
include apprenticeships, internships, fellowships, scholarships, graduate research opportunities, competitions,  
and more.
