As a new material, lithium ion battery has advantages of good security, high energy density, long cycle life, and low cost, so that it is regarded as the best choices for new age power sources. 1. High energy density: the energy density of lithium-ion battery is three times of lead-acid battery and two times of Nickel battery.

2. A good quality Li battery will accept a 0.5 C charge rate. The budget battery offerings can only do much lower rates because they have a mediocre BMS or cells that cannot dissipate the heat. But staying within the rating, you can buy an IOTA charger that will push those power levels. There are other brands as well.
