

Lithium solar battery cost vs benefit calculation in Singapore

Should you invest in solar batteries in Singapore?

For most solar homeowners in Singapore, we don't currently recommend investing in solar batteries. Why, you ask? Well, mainly due to the high initial cost and relatively modest returns on investment. Plus, you might need more frequent maintenance due to the current state of storage technologies.

Why should you consider solar battery storage in Singapore?

Excess solar power generated during the day is stored in batteries and utilized during peak demand periods or at night, reducing reliance on grid electricity and lowering energy bills.

What are the disadvantages of solar battery storage in Singapore?

What Are the Potential Drawbacks of Solar Battery Storage in Singapore? While solar battery storage offers numerous benefits, there are potential drawbacks to consider. The high initial costs, with a 10kWh battery averaging around S\$10,000, can significantly increase the overall setup expenses.

How much does a solar PV system cost in Singapore?

Currently, the cost of generating electricity (known as Levelised Cost of Energy, LCOE) for small-scale rooftop solar PV systems is estimated to range from around \$0.11/kWh - \$0.15/kWh in Singapore. You can calculate your LCOE using the LCOE calculator developed by the Solar Energy Research Institute of Singapore.

How do government incentives and subsidies affect battery storage?

Government incentives and subsidies play a significant role in the economics of battery storage. In the United States, the investment tax credit (ITC), which offers a tax credit for solar energy systems, has been extended to include battery storage when installed in conjunction with solar panels.

Why are solar batteries not working in Singapore?

Like most batteries, they naturally lose storage capacity over time, leading to shorter cycle lives. And, let's not forget the sweltering heat of Singapore, especially during the peak of the year. Unfortunately, high temperatures can accelerate the degradation of solar batteries, making them less effective as time passes.
