

What is the energy system in Kuwait?

Kuwait's energy system structure is relatively simple. The main demand sectors include power (electricity generation and potable water production), primarily an energy conversion sector, industry (chemicals, petrochemicals, and minerals and metals industries), transportation, and agriculture sectors.

Is Kuwait facing a changing energy world?

Kuwait, like all oil-producing countries, is facing a changing energy world today. Shifting supply, demand and technology trends have ushered in an energy world where oil-price volatility and market uncertainty are the defining features.

Is natural gas a primary energy source in Kuwait?

Natural gas is the second primary energy source, and it is growing to meet the rising local demands. Kuwait's proven gas reserve was estimated to be 1.78 trillion cubic meters in 2018. Gas supply sources are from domestic production and import despite the country's relatively large gas reserves.

Does Kuwait need liquefied natural gas?

The country plans to increase the share of gas-fired power plants in the future, but as gas production is underdeveloped, it is currently a net importer of liquefied natural gas (LNG). Kuwait has a soft target of increasing the share of renewables in total energy demand to about 15% by 2030, up from less than 1% today.

Are Kuwait national oil companies coping with the energy transition?

Kuwait national oil companies (i.e., KPC and its subsidiaries) need to examine and analyze the strategies that the major international oil and gas companies are adopting to overcome or mitigate the negative impact of the energy transition.

What is the energy demand in Kuwait?

A noticeable concern about the energy demand in Kuwait is the consumption behavior, specifically, the electric energy consumption. The average electricity consumption for the past ten years was 16.1 MWh per capita.
