

Mobile ESS unit cost breakdown in Greece 2025

How much does an ESS system cost?

Increased competition in the commercial ESS space Government incentives (e.g., tax credits in the U.S. and Europe) make systems more affordable. For example, in 2022, a 100 kWh system could cost \$45,000. By 2025, similar systems could sell for less than \$30,000, depending on configuration.

How will ESS pricing change over time?

Fixed operation and maintenance costs will remain stable at 2.5% of capital costs, while rapid declines in battery pack costs are anticipated to influence overall ESS pricing, similar to historical trends in photovoltaic systems, enhancing economic viability for consumers seeking freedom in energy independence.

Does Sungrow have a Bess project in Greece?

Sungrow and KTISTOR Energy have teamed up on several small BESS projects in Greece, amounting to a total capacity of 105 MWh. The projects will deploy Sungrow's PowerTitan 2.0 liquid-cooled BESS which was designed specifically for grid-forming applications.

Where are the ESS projects located?

The projects are located in central and northern Greece. Two will operate under the Greek ESS Tender scheme, while the other two will participate in the free market. The Dokos project in Rodopi, with a license of just over 8 MW for two hours, will offer an initial installed usable capacity of 25.065 MWh.

When will Sungrow's PowerTitan be available in Greece?

The companies aim to deliver the BESS by the summer of 2025, and this will be the first time Sungrow's PowerTitan 2.0 will be used in the Greek market. The projects are located in central and northern Greece. Two will operate under the Greek ESS Tender scheme, while the other two will participate in the free market.

How many MW can a Bess supply?

In the case of BESS connected to the Hellenic Electricity Distribution Network Operator (HEDNO) network, the following categories are envisaged: The first 400 MW (category A) concern BESS with a maximum power output greater than or equal to 5 MW. The next 200 MW (category B) are those with a maximum power output of 1 MW to 5 MW.
