

Nayax energy Antigua and Barbuda

Why did Nayax change?

This change represents a strategic evolution that aligns with Nayax's commitment to its partners and customers to simplify payments and energy management, and to maximize loyalty for the electric energy industry.

Is Nayax a profitable company?

Profitability has been an afterthought, and the company has operated at close to break-even, which is okay in light of its growth. For the quarter ending September 2024, Nayax reported \$83 million in revenue, up 38% YoY. Operating income was 1.5 million (2% operating margin). EPS was \$0.02 for each of the 36.3 million shares.

Can Nayax convert revenue growth into profitability?

Risks include the challenge of sustaining 30% growth, potential overpriced acquisitions, and the possibility of falling victim to fraud. Nayax's future looks promising if it can convert revenue growth into profitability, enhancing shareholder value. Nayax Ltd. (NASDAQ: NYAX) is an Israeli fintech company that operates around the world.

Is Nayax a good stock to buy?

Nayax Ltd. has shown impressive revenue growth, with a 37% compounded rate over five years, driven by global expansion and acquisitions. The stock is mildly undervalued, with potential upside if the company achieves its profitability targets, translating to a fair value of \$31 per share.

What is the difference between EV meter and Nayax?

Before this change, EV Meter mainly focused on energy and charging station management and hardware (AC Level 2 charging stations), while Nayax was mainly focused on card present payments for charging stations.

Could Nayax become a victim of fraud?

There is the possibility that the company could make a large, overpriced acquisition, diminishing the value to its shareholders. So far, the company's track record is unblemished. The company could become the victim of fraud, on the part of its customers or rogue employees. Nayax has and continues to show impressive revenue growth.

Antigua and Barbuda: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO₂ - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.
