## New Caledonia energy backup

Strong energy dependence linked to the metallurgical sector. New Caledonia's energy mix is 97.7% fossil fuel, including 54.1% petroleum products (mainly fuel oil and diesel), 43.6% coal, and 2.3% renewable energies. This high energy dependence is directly linked to the metallurgical industry which consumes 61.2% of the total energy consumption of the territory.

The Energy Transition Plan (STENC) defines New Caledonia's energy strategy for 2030. Adopted in June 2016, it constitutes the policy framework applicable until 2030. The STENC is structured around three main components: an extensive energy saving program, development of renewable energy to improve New Caledonia's energy self-sufficiency and a ...

Energy in the development of New Caledonia ... New Caledonia is characterized by cultural diversity, and human occupation of the territory is divided. A Melanesian, Kanak agrarian society (about 40% of the total population), and a largely urban society, of European and other origins (about 60%), co-inhabit a territory of approximately 19,000 ...

The first New Caledonia Energy Transition Plan (2016-2021) sets out 91 measures to encourage the energy transition of provinces and municipalities. The measures are in the form of practical sheets that detail the actors involved (private or public), an estimated cost, and a phasing in the short, medium, and long term, aiming to ensure the ...

In 2022, New Caledonia's electricity consumption was heavily reliant on fossil fuels, making up more than 80% of the total energy mix. Coal was the largest contributor within this category, accounting for about half of the total electricity use. On the other hand, low-carbon or clean energy sources played a smaller role, constituting just under 20% of the electricity consumption.

The government of New Caledonia, a French overseas territory in Polynesia, has announced plans for a 150MWh battery energy storage system (BESS) to be deployed by IPP Akuo Energy. Authorities have enlisted Akuo, a ...
