

Power automate blob storage DR Congo

Can power automate manipulate blobs using Azure Blob Storage Connector?

Power Automate can easily manipulate blobs using Azure Blob Storage Connector. One cannot be faulted for thinking a method called "Get Blob Metadata (V2)" would return,uhm,metadata. It does return something that looks like a warped version of blob properties but does not contain the actual metadata.

How to set up Azure Blob storage flow in power automate?

In Power Automate, I started with the Template provided by Microsoft and set up the flow: The flow requires two connectors to be set up: While editing Azure Blob Storage we see that we need the name of the azure storage, in my case "svflorida" and storage access key: Storage access key is located in in azure portal under Access Keys:

How do I access Azure Blob Storage?

Use Azure Active Directory to access your Azure Blob storage. Use Azure Active Directory to access your Azure Blob storage. Use Azure Active Directory to access your Azure Blob storage in Azure Government. Use Microsoft Entra ID to access your Azure Blob storage. Use your own Microsoft Entra ID app for service principal authentication.

What products and regions can I use the Azure Blob Storage Connector?

This connector is available in the following products and regions: The Azure Blob Storage connector now supports connecting to Azure Data Lake Storage Gen2 (ADLS Gen2) accounts, using multi-protocol access. You can read more about this new feature, including the availability and known limitations in this blog.

What is a blob container in Azure platform?

In Azure Platform I created a storage account and in it I created a Blob Container. "A container organizes a set of blobs, similar to a directory in a file system. A storage account can include an unlimited number of containers, and a container can store an unlimited number of blobs."

Is there a way to connect to power platform blobs?

There is only one reliable workarounds as of now - don't use firewalls in your storage accounts if you want to connect to them from Power Platform. The connector does not support blob names and paths that contain URL decodable characters, i.e. ""+"" or ""%"" followed by two hexadecimal digits. The connector does not support gateways.

In Power Automate, you can interact with Azure Blob Storage using various actions: - Create Blob : Upload a new blob to a specified container. - Get Blob Content : ...

"There is only one reliable workaround as of now - don't use firewalls in your storage accounts if you want to connect to them from Power Platform." I found a work around by listing all of the Power Automate IP's for

Power automate blob storage DR Congo

my region of Power Platform in the storage firewall, and it works, but would like to know if this a long term viable ...

I am trying to export the content of csv files stored in Azure Blob Storage to Excel tables in an automated way. I did some research and found in few blog articles that Azure Logic App could be used for the conversion. I tried to implement something similar but couldn't succeed. Any suggestions/help would be appreciated. Thanks.

We have a power automate workflow designed to move the files uploaded on Sharepoint to Azure BLOB Storage container. The SAS token is generated to enable the access for the flow. It worked until recently, when

Power automate blob storage DR Congo

I have a Power automate Flow which uses Azure blob connector to read excel file from the blob using the Get blob content action. The problem is I need to process the excel data and save it in D365 f and O entity. for that I need the data in json format. ... Unable to upload to Azure BLOB storage via Az Module or Az/CLI. 1. Connecting Azure Blob ...

When a user uploads a CSV file to the sharepoint in a particular directory, a new blob is created on the Azure Storage Container for the same file creating all it's contents. Problem - I haven't been able to copy the contents of the CSV which is uploaded on Sharepoint.

I have a Logic App that monitors a blob storage container for an XML to show up, then I do a "Get Blob Content using Path" to grab the XML content. I then use that content later in the flow to send in an HTTP request (to an Azure Function that then zips it up and returns the zip file as an output).
