

What is the current state of electricity supply in Libya?

Current state of electrical energy supply system in Libya The Libyan economy and energy sector are still heavily dependent on fossil fuels. In fact, hydrocarbons account for over 65% of the country's GDP and 96% of the national revenue ( El-Fadli, 2012 ).

Which sector has the highest electricity demand in Libya?

The Libyan historical load profile data show that the maximum power occurs during the summer season and the residential sector represents the highest share in electrical energy demand followed by the commercial and industrial sectors, as presented in Fig. 2 ( REAoL, 2012 ).

How well did the electricity supply and provision enterprise perform in Libya?

Generally speaking, the electrical energy supply and provision enterprise performed reasonably well in Libya, before 2011, with the installed generation capacity superseding load demand with an adequate margin.

Is the sell-back price of electricity profitable in Libya?

However, at an inflation rate of 28%, the 2017 rate in Libya, the sell-back price of electricity at 20 \$/kWh is not profitable even with up to 60% incentives of the capital cost. Sensitivity analysis of the NWA at electricity rate = 0.1 \$/kWh and FiT = 0.2 \$/kWh.

Where is the electricity network located in Libya?

Similarly, most of the Libyan electric network is concentrated on the coast, where most of the inhabitants live. The transmission system is completely interconnected nationally and regionally to ensure both reliability and security. The Libyan electric transmission line network consists of 13,706 km of 220 kV.

What's going on with Libya's electricity grid?

As the political violence in Libya rumbles on for nine years now, the electrical power grid infrastructure is bogged down with frequent military incursions, rocket hits, sabotage and vandalism.
