What is shared energy storage?

Shared energy storage involves multiple agents, objectives, and constraints. Its configuration and operation require careful coordination and decision-making, with attention to market dynamics, contract structuring, and revenue sharing.

How can shared energy storage services be optimized?

A multi-agent model for distributed shared energy storage services is proposed. A tri-level model is designed for optimizing shared energy storage allocation. A hybrid solution combining analytical and heuristic methods is developed. A comparative analysis reveals shared energy storage's features and advantages.

Is shared energy storage a viable alternative to conventional energy storage?

A comparative analysis reveals shared energy storage's features and advantages. Shared energy storage has the potential to decrease the expenditure and operational costs of conventional energy storage devices.

How to constrain the capacity power of distributed shared energy storage?

To constrain the capacity power of the distributed shared energy storage, the big-M method is employed by multiplying  $U_{e s, i}^{p o s}(t)$  by a sufficiently large integer  $M$ . 
$$(5) P_{e s, i}^{m i n} U_{e s, i}^{p o s} \leq P_{e s, i}^{m a x} \leq M U_{e s, i}^{p o s} E_{e s, i}^{m i n} U_{e s, i}^{p o s} \leq E_{e s, i}^{m a x} \leq M U_{e s, i}^{p o s}$$

How does distributed shared energy storage benefit SESO & EC?

The analysis indicates that implementing distributed shared energy storage enables SESO to reach profitability and recover investment costs within 5.33 years. EC can also slightly reduce their electricity costs while gaining access to two or more energy storage devices for dynamic backup.

Should energy storage devices be shared among multiple agents?

In summary, configuring and sharing an energy storage device among multiple agents, in consideration of their respective interests, can lead to more efficient utilization of the device. Moreover, such a setup can determine the most suitable configuration and operation mode under the influence of various factors.

Request PDF | On May 1, 2024, Liwei Ju and others published Two-stage robust transaction optimization model and benefit allocation strategy for new energy power stations with shared ...

Take the distributed energy storage power plant built by lead-carbon batteries as an example, it should consider the direct economic benefits of Internet companies investing in energy storage ...

Firstly, distributed wind power, distributed photovoltaic and flexible load resources are aggregated into virtual power plants to analyze the cooperative operation mode ...
