

Is shared energy storage sizing a strategy for renewable resource-based power generators?

This paper investigated a shared energy storage sizing strategy for various renewable resource-based power generators in distribution networks. The designed shared energy storage-included hybrid power generation system was centrally operated by an integrated system operator.

What is a two-stage model of energy storage shared capacity?

Zhao, Wang, Huang and Lin established a two-stage model in which an investment decision was made in the first stage and the virtual energy storage shared capacity determined in the second stage. SES operational strategies have also attracted research attention.

Is shared energy storage feasible?

An interactive bi-level nested genetic algorithm is designed. A comparative analysis is conducted to validate the shared energy storage feasibility. Rather than using individually distributed energy storage frameworks, shared energy storage is being exploited because of its low cost and high efficiency.

How can energy storage be shared in distribution networks?

By changing the parameters of the power loss rate in transmission lines, the investment budget, the power cost and capacity cost, and the feed-in tariffs of wind and PV power, the proposed model is able to share energy storage appropriately in distribution networks and operate the whole power generation system economically.

Does sharing energy storage make a good SES size?

By sharing energy storage, the ISO attempts to design an appropriate SES size for all stakeholders. To evaluate the economic feasibility of setting an optimum SES size, the objective function is to maximize the net benefits of all stakeholders, as shown in Eq. (4). Eqs.

Why is sharing energy storage important?

This case serves as a benchmark case to validate the importance of sharing energy storage, which is deemed to store the surplus wind and solar power during off-peak hours to comply with the power demands in later hours. Case 2: In this case, a SES power station is considered and the proposed bi-level model is applied.
