This solar system type shares the features of both grid-tied and off-grid setups. A hybrid solar system setup is connected to the electrical grid. At the same time, it uses batteries to store excess energy. The reason why most people don't prefer installing hybrid systems is their higher cost which increases due to the addition of batteries.

Many states and territories have enacted solar access laws, which prevent HOAs from prohibiting or unreasonably restricting solar installations. Solar access laws vary by state, so if you're planning to install solar and have an HOA, it's important to know the laws that apply to you. Learn more about HOAs and solar energy.

Solar energy has continued to grow rapidly across the United States in 2024, cementing its position as a crucial component of the nation's renewable energy strategy. Advances in solar technology, combined with supportive federal and state policies, have enabled a significant expansion of solar installations in both residential and utility-scale sectors.
