Will the 10th basic energy plan change South Korea?

In its current form, the 10th Basic Energy Plan that will come into force this year is unlikely to change that. The country needs more ambitious renewable energy targets, a sentiment also echoed by South Korea's biggest businesses. Fossil fuels widely dominate South Korea's energy mix.

Does South Korea have a nuclear power plant?

South Korea relies heavily on nuclear power for its electricity generation, with approximately 27 reactors operating in the country as of 2021. Nuclear energy accounts for nearly 30% of South Korea's total electricity production, making it a crucial source of power for the nation.

Does South Korea have a high energy cost?

South Korea's heavy reliance on fossil fuels has historically led to high electricity costs, as seen during the global energy crisis in 2022. South Korea aims to mitigate these issues by diversifying its energy sources and enhancing energy efficiency across industries.

What is South Korea's energy mix by 2022-2036?

The plan covers 2022-2036, with a revision every two years. As per the targets, South Korea's energy mix by 2030 and 2036 are as follows: Despite being one of the most innovative countries, South Korea is a climate laggard. The share of renewable energy in the power mix of South Korea is just 9% as of 2021.

How many nuclear power plants will South Korea have by 2038?

South Korea aims to have 30 nuclear plants by 2038 and to more than triple its solar and wind power output to 72 GW by 2030. The government also plans to replace ageing coal power plants with more sustainable options like pumped storage hydroelectricity and hydrogen power plants.

What percentage of South Korea's energy consumption is renewable?

Although renewables accounted for the smallest portion (3%) of South Korea's primary energy consumption in 2021, renewables were the only energy source with a steadily increasing share since 2015. At that time, renewables accounted for less than 1% of total energy consumption.<sup>5</sup>
