Who is ACEIN gathering square shell energy storage cells?

ACEIN Gathering Square Shell Energy Storage Cells is a technology enterprise specializing in the design, development, manufacturing and sales of energy storage lithium-ion cells and battery packs, and is committed to creating zero-carbon green energy storage battery products.

Why are soft pack cells thermally encapsulated?

The size change is flexible, the cost is low, the energy density of a single cell is higher than that of both cylindrical/square cells. Soft pack cells are thermally encapsulated due to their use of aluminum-plastic packaging film as a material.

What is hard pack lithium battery consistency?

Hard pack lithium battery consistency is relatively difficult to ensure that more models, the processing process is difficult to be completely consistent, suitable for customized production manufacturing, is not convenient for lithium battery pack automated production.

How does thermal encapsulation of a battery work?

So the thermal encapsulation of the battery relies mainly on the PP layer melting bonding together under the heat of the header, then the header is withdrawn the bond is cured by cooling down. #Aluminum-plastic film forming process# FPCs can be designed in different sizes according to customers' needs.
