Temperature is a critical aspect of lithium battery storage. These batteries are sensitive to extreme conditions, both hot and cold. The ideal temperature range for lithium battery storage is 20°C to 25°C (68°F to 77°F). This temperature range helps to maintain the battery's chemical stability and avoids rapid aging.

Li-Ion batteries have a "sweet spot" for storage. Contrary to standard AA or AAA batteries that you buy fully charge, Li-Ion cells CAN NOT remain fully charged for a long period of time without degrading. Fully charged Li-Ion - degrades the chemistry inside the cells when storage is above 48H as its full of "power" that needs to do "something";
