

Talent demand in energy storage industry

Why is hiring talent a problem in the energy sector?

Hiring talent to backfill critical roles and fill new roles presents a unique set of obstacles in the energy sector. Experienced workers are retiring, mid-tenure employees have new opportunities in adjacent industries, and data indicates that fewer new employees are entering this workforce.

Are energy and materials companies attracting and retaining talent?

Competition for employees is also heating up. Since 2016, out of all the employees who left their roles in energy and materials companies, 42 percent moved to a different industry. ⁹ This underlines the very competitive nature of attracting and retaining talent within the sector.

What makes a successful talent strategy?

A successful talent strategy most often hinges on facts rather than intuition when it comes to understanding future talent needs and is anchored in the company's strategic and business goals. Talent plans can be built up from project-level talent needs to inform an integrated skill-based talent view.
