Gravity (chemical) battery
A gravity battery is a type of energy storage device that stores gravitational energy--the potential energy E given to an object with a mass m when it is raised against the force of gravity of Earth (g , 9.8 m/s^2) into a height difference h . In a common application, when renewable energy sources such as wind and solar provide more energy than is immediately required, the excess energy is used to move a mass upward agains...

In simple terms a gravity energy storage device uses an electric lifting system to raise one or more weights a vertical distance thereby transferring electrical energy to be stored as ...
