

The problem with large-scale energy storage

Fluctuating solar and wind power require lots of energy storage, and lithium-ion batteries seem like the obvious choice--but they are far too expensive to play a major role.

Very large-scale long-term storage needs can only realistically be met by storage that has a very low capital cost per unit of energy stored and suffers negligible self-discharge losses.

Inter-seasonal energy storage is clearly a very difficult problem to solve, because of the enormous amounts of energy that need to be stored: 16 TWh or more. If sufficient ...
