the 240V AC in the switchboard using an AC Battery inverter. Here's how it works: As you can see, the output of the micro inverters is 240V AC and the Battery Inverter converts the battery's DC to 240V AC, so everything works together nicely.

The solar runs the house without the grid being up and solar also charges the batteries. The GS4048 also has a generator input if needed. The GS4048 phase shifts the micro inverters if the solar is producing too much energy. Phase shifting the inverters by changing the ac frequency supplied to them causes them to start shutting down.

All the solutions can be AC coupled to your micro-inverters, SolarEdge inverter and many other PV grid-tied inverters. You can check out the integration guidance on our Resource Center. ...
