Solar irrigation pumps are a game-changer for farmers Uganda. They convert sunlight into electricity, powering pumps that draw water from wells, rivers or lakes to irrigate crops. This technology eliminates the need for costly and polluting diesel or electric pumps reducing both operational costs and carbon footprint.

Build your system online by using our wizard. Get multiple Solar quotes from accredited installers in your local area. Solar Central - Fast, Free & Simple

The US Embassy in Kampala, Uganda has called for vendors to provide quotations for the supply and installation of a solar array backup system. DEADLINE: 28 June 2024. The specifications are: Solar array capacity of at least 75kW Peak. Rooftop mounting. Hybrid inverter capacity - 60kW.

Definition. Drip irrigation is a technique in which water flows through special small diameter plastic pipes fitted with outlets called emitters or drippers spaced at the same spacing to provide moisture around the roots of plants.. Water is distributed through the emitters directly into the soil near the roots through a special slow-release device.
