Or think of kw as your salary and kwh as your savings :D, In my case, we have a 9.5kwh battery, fed by a 3kwh inverter. That means that even if the battery is FULL, if I plug in some theoretical device that wants to draw power at 9,000 watts... the battery can only squeeze out 3,000. The rest will get imported from the grid. Why does this matter?
