Will US energy industry invest \$100 billion in battery energy storage systems?

Members of the US energy industry has committed to investing \$100 billion over the next five years to build and buy American-made batteries for large, utility-scale deployments of battery energy storage systems (BESS).

What is the market share of energy storage in 2024?

By technology, batteries led with 82% of the United States energy storage market share in 2024, while hydrogen storage is projected to expand at a 28.5% CAGR through 2030.

Are battery upgrades a good investment?

Investor interest is also on the rise. But this isn't an easy market to master. BESS investments are a long-term commitment; projects typically run for 20 years or more with battery upgrades. They are also highly localized and carry more risk than some other clean energy investments.

What makes a battery investment a success?

Success requires understanding the dynamic interaction of regional variations, electricity market design, technology and financing -- as well as an acceptance of volatility. To help cut through the complexity, EY teams have identified and ranked the attractiveness of the world's top global battery investment markets for the first time.

Are lithium-ion batteries the future of energy storage?

Lithium-ion batteries delivered 82% of 2024 deployments, cementing their role as the backbone of the United States energy storage market. Cost drops below USD 300 per kWh, and cycle lives exceeding 5,000 cycles reinforce their suitability across duration bands.

Why do state regulators approve cost-recovery for battery investments?

State regulators increasingly approve cost-recovery for battery investments, treating them analogous to traditional generation. The United States energy storage industry sees residential uptake accelerating at a 27% CAGR, spurred by falling component prices and a cultural shift toward energy independence.
