

Although the LMBs demonstrate great potential in energy storage, at the current stage the wide application of LMBs is discouraged by the high activity of Li, significant volume ...

Hydrogen energy, as an important product of water splitting, is an ideal clean energy source. In recent years, water electrolysis has become an effective and sustainable ...

In this work, we present a simple yet cost-effective approach to the interface modulation of PP-based nanocomposites that results in outstanding capacitive energy storage ...

These results indicated that the introduction of HECs broadened the scope of designing high energy storage performance systems, and the 0.9 (0.75BT-0.25NBT) ...

The implementation of high-energy-density storage devices can be facilitated by the built-in situ cathode electrolyte interphase (CEI) between Ni-rich cathodes and gel polymer ...

Zihao Guo: Formal analysis, wrote the paper, to which all authors provided feedback. Panpan Zhang: aided in the dynamic mechanical measurements. Junmin Wan: ...

Synergistically dissipating the local strain and restraining lattice oxygen escape by fine-tuning of microstructure enabling Ni-rich cathodes with superior cyclabilities

A battery merely consists of carbon additives and binders was also assembled with a negligible capacity storage of ~ 7 mAh g⁻¹ (Fig. S3). This reference experiment reveals ...

Frustrated Lewis pairs (FLPs) are composed of Lewis acid and base that cannot form a conventional Lewis acid and base adduct due to steric hindrance or electronic factors ...

Abstract Solid-state lithium metal batteries (SSLMBs) are highly promising for future energy storage systems due to their exceptionally high lithium metal anode capacity and ...

Porous carbons hold broad application prospects in the domains of electrochemical energy storage devices and sensors. In this study, porous carbon derived from ...

The applications of (Bi, Na)TiO₃-based ceramics in capacitive energy storage are limited by the incommensurate recoverable energy storage density with the energy storage ...

Precisely regulating the electronic structures of metal active species is highly desirable for electrocatalysis.

However, carbon with inert surface provide weak metal-support ...

Chinese research teams have made marked progress in superconducting quantum computing and photonics quantum computing technology, making China the only ...

Although antiferroelectrics (AFE) can achieve high P_{max} and small P_{rat} the same time, the transition of AFE-FE leads to a large strain, which restrains the service life of ...

This manuscript summarizes the storage mechanisms of Zn^{2+} by synthesizing the significant findings and conclusions from previous studies. It compares six common Zn^{2+} storage ...

Since the first exfoliation in 2004, graphene has been widely researched in many fields of materials engineering due to its highly appealing propertie...

Hydrogen energy evolution via photoelectrochemical (PEC) water splitting has gained interest and has been extensively studied in recent years. This me...

Layered Li-rich Mn-based oxide cathode materials (LRMO) have attracted extensive attention because of their high energy density. However, the poor cyc...

Lead-free $(1 - x)Bi_{0.5}Na_{0.5}TiO_{3-x}SrTiO_3 + ywt\%Nb_2O_5$ electroceramics were synthesized using the conventional method to investigate the influences of $SrTiO_3$ content and ...

The introduction of self-healing mechanism into flexible energy storage devices is expected to solve the problems of mechanical and electrochemical performance degradation caused by ...

Dielectric capacitors using antiferroelectric materials are capable of displaying higher energy densities as well as higher power/charge release ...
