What is the market share of carbon fiber felt?

According to the market share forecast analyzed based on the type of raw materials used to produce felt, the three primary carbon fiber materials, PAN, rayon, and pitch, account for most of the ratio, and among these, PAN and Rayon occupy most of the market (\$253,361,500 and \$211,234,300, respectively).

Why are carbon and graphite Felts so expensive?

Carbon and graphite felts are typically more expensive compared to other conventional insulation materials. The high cost can be a limiting factor for widespread adoption, particularly in cost-sensitive industries. The production of carbon and graphite felts requires specialized manufacturing processes and raw materials.

Which company makes the most carbon felt?

The top six companies in the global carbon felt market are SGL Carbon, Toray, Morgan Advanced Materials PLC, Kureha Corporation, Nippon Carbon, and Mersen, which account for 65.8 % of the total market (Fig. 7). Toray has the most enormous profits among these manufacturers, while the others record much smaller profits.

What are the future prospects of NAS carbon felt?

The future prospects of the NaS carbon felt, as well as the general product, were presented. Electrodes made of carbon materials are applied in various forms in the energy field. Among them, carbon felt is one of the essential components in sodium-sulfur (NaS) batteries, a leading candidate for long-duration energy storage system (ESS).

What is the future demand for carbon felt?

When comparing and analyzing the carbon felt market size by continent, the future demand for felt is expected to be led by the Asia/Pacific region (53.1 %), followed by Europe (19.5 %), North America (18.1 %), and Middle East & Africa (5.3 %), respectively (Fig. 5).

Why is carbon felt used?

In this reaction, carbon felt is mainly used because the cathode material needs to sufficiently contain sulfur and withstand the reaction at a high temperature of 350 °C to form  $\text{Na}_2\text{S}_x$  without chemical/mechanical change. Also, carbon felt improves the conductivity of sulfur electrodes.
